1760500	Atelier Pentagon	140-200	on request	-	-	-	-	

Installation Advice

Mounting on the shower tray

HSK shower enclosures are designed to be installed by a specified dimension from the edge of the shower tray. This measurement is given in all installation instruction documents. Because of this, shower enclosures are always smaller than the stated size. Please refer to the adjustment options of each enclosure in the brochure.

Installation on tiles with standard size

Mounting a standard cabin on tiles - please tell us when ordering, if it is planned to install a standard shower on tile and if the glass elements must fall on the ground joint. The dimensions of the tiled surface are then smaller. On request, we tiling plan available.

Installation on tiles with made to measure, half-glass dimensions

At a order with "installation onto tiles" please specify the exact dimensions of the shower area. To order a shower cabin mounted on the tiles, HSK automatically manufactures made-to-measure, so that the glass fits to the millimeter on the joint tiles.

We offer other installation systems as such. assembly "outside edge of the profile". If you are unsure in taking measurements, please send us a diagram. We are happy to help, even there!
